

## Forklift Training Program Penticton

Forklift Training Program Penticton - The forklift is a common powered industrial vehicle which is in wide use nowadays. They are occasionally known as hi los, lift trucks or jitneys. A departments store will utilize the forklift to unload and load merchandise, whereas warehouses would make use of them to be able to stack materials and products. And grocery stores use small models to drop stock in the aisles. Whether loading material at a construction site or transporting lumber at a sawmill, forklift operators are needed to be well trained and certified. The main concern should be on the safety of the worker and pedestrian. This lift truck training program teaches the health and safety rules governing forklifts in order to guarantee their safe and efficient operation.

### Forklift Training Program Safety Tips:

Right training ensures that operators of forklifts could maintain control of the lift truck in tilting, traveling and lifting. Only skilled operators should drive a forklift.

When the forklift is in operation; head, arms, hands, feet and legs must be kept in the forklift. Lift truck forks should be kept low to the ground while being slightly tilted back. Observe posted traffic signs. Lessen speed and sound the horn if taking a corner. If the vision of the driver is blocked by the load, drive in reverse slowly. Pre-check the ground for potential dangers, like for example wet or oily spots, objects, rough patches, holes, vehicles and people. Prevent stopping suddenly.

If pedestrians pass across the vehicle or moves into a blind spot, the forklift must be stopped, the load lowered, waiting until the way is clear. If a load is being transported on an incline, the forks should be pointed downhill without a load and uphill with a load. The lift truck must only be turned around when on level ground.

Safety tips while steering - When traveling at good speeds, never turn the steering wheel sharply. Support the load utilizing the front wheels and turn utilizing the rear wheels. A truck which is overloaded would be difficult to steer. Follow load limits. Never add a counterweight as a way to improve steering.

Safety guidelines while loading - Follow the suggested load and capacity limits of the lift truck. This information is displayed on the data plate. Always ensure that the load is positioned according to the recommended load centre. The lift truck would remain steady so long as the load is kept near the front wheels.

The mast of the forklift must be in an upright position before inserting the fork into a pallet. Prior to inserting the fork, level it.
