

## **Aerial Lift Train the Trainer Penticton**

Aerial Lift Train the Trainer Penticton - The Aerial Lifts Train the Trainer Certification Program teaches trainers how to efficiently train operators in safe industrial mobile machinery operation. Trainers are provided with in-depth instruction about aerial lift equipment. The program is offered on an open enrollment basis and delivered at selected training locations. Before the certification, trainers are assessed and graded based on their knowledge and demonstrated skills.

The Aerial Lifts Train the Trainer Certification Program emphasizes practical learning. As the best training provider within the business, we provide the best hands-on training possible through opportunities to practice concepts and techniques taught in the classroom. Together with hands-on experience, trainers develop general knowledge of instructional techniques and machinery theory, classroom and field communication skills, and ability to efficiently train and evaluate operators. Trainers will gain an understanding about what traits make an effective trainer.

The Aerial Lift Train the Trainer Certification Program teaches the instructional techniques included in communicating concepts within a classroom and/or field situation. Knowledge requires a training component to be effectual in workplace situations. There are three factors of equipment operation which the trainer should learn how to convey to operators: what to perform; how to do it; and why it needs to be done.

In the program, trainers would be given the detailed, latest reference material to better help them convey the information to machine operators. The guidebooks utilized, include detailed information about all aspects of industrial mobile equipment operator training. Included in the package are training aids that provide a visual reference so as to improve the learning experience. The equipment-specific training products contain necessary materials for both the trainer and the operator: overhead transparencies, videos/DVD's, kinds of equipment, safety message posters; stability pyramids and digital training aids.
