

## **Forklift Training School Penticton**

Forklift Training School Penticton - The Importance Of A Forklift Training School When Utilizing The Equipment - Federal and industry regulators have established the criteria for forklift safety training based on their current standards and regulations. Those wanting to operate a forklift must complete a forklift training School before utilizing one of these machines. The accredited Forklift Operator Training Program is intended to offer people training with the knowledge and practical skills to become a forklift operator.

Mobile Equipment and Vehicle safety regulations that apply to forklift operation include pre-shift inspections, and regulations for lifting and loading.

An inspection checklist should be done and given to the supervising authority before starting a shift. When a maintenance problem is uncovered, the utilization of the particular equipment must be stopped until the issue has been addressed. To be able to indicate the machinery is out of service, the keys should be removed from the ignition and a warning tag placed in a visible spot.

Loading safety regulations consist of checking the forklift nameplate's rating capacity and knowing if the load weight falls within capacity. The forklift forks must be in the down position when the forklift is starting up. Don't forget that there is a loss of roughly 100 pounds carrying capacity for every one inch further away from the carriage which the load is carried.

Lifting should start with the driver moving to a stopped position about three inches away from the load. The mast must then be leveled until it has reached a right angle with the load. Lift the forks to an inch under the slot on the pallet and drive forward. Next lift forks four inches. Tilt back the load to secure it for moving. Drive the lift backwards if the load obscures frontal vision. Check behind and honk to warn other staff. Never allow forks to drag on the ground.
