

## **Manlift Ticket Penticton**

Manlift Ticket Penticton - The Elevated Platforms and Manlifts Certification program helps to provide the needed training on the work practices, safe operating procedures, rules and regulations regarding the everyday activities for the operators of this machinery. The program has been designed for individuals who are actively involved in these activities or individuals who have a basic understanding of this equipment.

In the past couple of decades, aerial platforms and manlifts have become a common sight in industrial maintenance applications and on construction job sites. These machinery provide an easy way to lift workers near what should be done on a stable platform apparatus, allowing workers to do tasks with greater safety and comfort rather than being perched on top of ladders or scaffoldings.

The manlift is like other industrial tools in that they are safe if used properly. Since they elevate staff above floor or ground level, accidents can occur easily and this can result in serious injuries or fatalities for both the operators of the manlift and whoever passerby who may not be lucky enough to be standing below.

There are different types of manlifts. The majority fall into 1 of 2 categories: the articulating boom lift, which has the capability of both vertical and horizontal movement and the scissors lift, that is capable of moving up and down.
