

Warehouse Forklift Safety Training Penticton

Warehouse Forklift Safety Training Penticton - The company will face claims for liability when damage and injuries are sustained in an accident at the workplace. Warehouses could be a dangerous place to work for its employees, making employee safety a top priority for the business. Warehouse safety training is amongst the most effective measures to protect personnel, while minimizing costs associated with accidents and injuries.

Warehouses hold stock which can present a variety of dangers, particularly related to materials handling. Moving stock, either manually or using powered machinery, could cause injuries to workers' hands, fingers, toes and feet. Slipping, tripping and falling are common causes of injury. Heavy objects could fall off shelves and harm workers. Forklifts and other machines carry inherent dangers because they manipulate heavily laden pallets. Incorrect lifting is a common source of back injuries. Even box cutters, nails and splinters can cause harm.

Depending upon the materials and goods which are being handled, the conditions of the warehouse could change from one minute to the next, especially with the machine being used and the job being done. Due to the various possible hazards in warehouse environment, warehouse operations are regulated by many different standards. There are regulations for material handling and storage, for walking and working surfaces, and rules governing the selection and use of PPE (personal protective equipment).

A lot of warehouse safety regulations are common sense. Here are several examples of warehouse rules all personnel must be familiar with:

1. Safety is a top priority at all times while working in a warehouse.
2. PPE, like for example safety shoes, gloves, hard hats and eye protection, must be worn as appropriate.
3. Possible hazards must be inspected and reported.
4. Observe and Follow warning signals and signs.
5. Pay attention to the tasks you are doing.
6. Pay attention to what others are doing nearby - especially forklifts and various hazardous machines.
7. Make sure that stacked materials and products are secured and stable.

Following good housekeeping rules would help to ensure a safe warehouse for all staff. Essential housekeeping rules include keeping floors and aisles clear of items, like cords and wires. Never perch objects insecurely on a surface. When spills occur, clean up at once. Throw trash in proper containers. Keep fire exits, fire extinguishers and sprinklers accessible. Put box cutters and various sharp tools away immediately after using. Report tripping hazards such as loose or damaged flooring.
