The U.S. forklift division based in Cleveland has a skilled team knowledgeable in Sales, Purchasing, Marketing, Logistical and Technical Support.

Doosan's forklift history

Korea's initial domestic lift truck marketplace was an open-import enterprise. In the 1960's, Korea Machinery Co. Ltd. begun to import assembled forklifts as part of a nationwide machinery expansion venture. Initial product sales of this manufacturing equipment focused on large business communities, the armed services and on state-run firms. This ultimately led to a merger with Daewoo Heavy Industries Ltd. In 1976, the Forklift Division begun business operations throughout Korea to overhaul and sell this heavy equipment. By 1978, a lift truck manufacturing plant was successfully completed. Continuous technical training became the new focus for improving quality and product development.

Development of Lift Truck Exports

Daewoo started the first domestic forklift business in 1967, and rapidly acquired a massive 90% share in the Korean Materials Handling market. By the 1980's, Daewoo's advanced technological advancements combined with sales success placed them in a position of considerable expansion of their lift truck business.

In 1981, Caterpillar Industrial Inc. of the United States, proposed a cooperative enterprise project to respond to competitive pressures in the US materials handling market. This project radically expanded Daewoo's lift truck sales. Construction was finished in 1984 to facilitate a new plant which helped establish the company for the fabrication of high end added-value products suitable for export. In 1993, the corporation had a international sales network and started exporting designs they had established through in-house expertise, as an independent product. Certifications were then acquired from CE of Europe, UL of the United States and ISO 14001 and ISO 9001, securing expansion opportunities into international marketplaces.
